| Criteria  |
|---|
| Spastic diplegia with upper motor neurone signs <sup>1</sup>        |
| Aside from bladder or bowel urgency, no other neurological deficits |
| Normal MRI imaging of head and spinal cord                          |
| Normal CSF  |
| Routine neurological bloods normal                                  |

<sup>1</sup> *Hyper-reflexia permissible in all four limbs*

Is there a family history of HSP?

Yes

No

If yes, is this consistent with autosomal dominant inheritance?

Yes

No

For complicated HSP and other diagnoses, please consider referring to the neurogenetics clinic for phenotyping and consideration of appropriate gene panel testing. For further clinical advice, please contact Professor Andrew Jackson ([andrew.jackson@nhslothian.scot.nhs.uk](mailto:andrew.jackson@nhslothian.scot.nhs.uk)).

**Please email the completed form to [Edinburgh.DNA@nhslothian.scot.nhs.uk](mailto:Edinburgh.DNA@nhslothian.scot.nhs.uk) or post to Duty Scientist at address above.**
